The simple, cost-effective alternative to traditional metal roofing.■

Seamlock - Traditional Roof & Wall profile

The simple, cost-effective alternative to traditional metal roofing.

Traditional seam roofs date back hundreds of years and use materials like lead, copper and zinc which, despite advances in prefabrication techniques and fixing technology, require a highly skilled, specialised installer to achieve a good installation. Sheets will often be cut and welded on-site and the nature of the products means that they are usually bespoke. The attractive finish of this labour-intensive, complicated and expensive roofing option can be emulated by EPL Seamlock which is cost-effective, precision manufactured and quick to install.

Convenient and commercial are two terms that perfectly describe this new roofing system, which is a quickly installed alternative to traditional metal roofing. It provides the aesthetic and charm of time-honoured materials like lead or zinc and is manufactured using the latest technology.
